RESPONSE TO OFFICE ACTION

Dear Sir:

This responds to the Office Action dated November 4, 2002. Please amend the above-identified application as follows.

IN THE SPECIFICATION

Please replace the paragraph starting on page 8, line 23 with the following replacement paragraph.

D' Figure 4 illustrates an alternate embodiment of the multi-layer contact 22 to a semiconductor device 20 with multiple contact layers 22A, 22B, and 22C. Ohmic layer 22A provides ohmic contact to semiconductor 21. A barrier metal layer 22B interposes the ohmic layer 22A and the reflector layer 22C. The barrier layer 22B is used to prevent diffusion of the ohmic layer 22A into the reflector layer 22C, thus preventing the creation of any inter-metallics. These inter-metallics could degrade the specific contact resistance and reflectivity of the contact and thus the efficiency of the device. This is a reliability issue that should be avoided for long lasting devices. The barrier metal layer should be kept thin, e.g. $< 100\text{\AA}$, to minimize light absorption and should be as reflective as possible to contribute to the reflectivity of the contact. Exact
